

Bacteria-Resistant Hotel Phones

Protect your guests from unwanted germs

Holidaymakers and business travellers check in and out of your hotel on a daily basis—and so do their germs. But there's an easy way to help keep your guests and housekeeping staff healthy. Fit your hotel with VTech Hospitality phones manufactured with antibacterial plastic. You'll help reduce the spread of the common cold and other bacteria-caused illnesses.

Constant Contact

Studies show that 80 percent of all infections are spread through contact. That makes hotel environments prime targets for bacteria and infection—especially areas that are touched by multiple people. Guests and staff are in constant contact with innumerable surfaces: doorknobs, remote controls, pens, light switches, clock radios, telephones and so much more.

No matter how efficient your housekeeping team is, it's difficult to eradicate all the germs that yesterday's guests left behind.

With VTech Hospitality phones, everyone has an added layer of protection—and peace of mind.

Antibacterial Plastic

What does antibacterial plastic really mean? In our case, it means that we've added an inorganic antibacterial agent, to the plastic used in our hotel phones. This uses silver and other ions to prevent the growth and migration of bacteria, mold and fungus. Through nanotechnology, the ions are infused into the plastic, creating a stable agent that maintains its effectiveness throughout the life of our phones.

In the USA, the Food and Drug Administration (FDA), the Environmental Protection Agency (EPA) and the National Sanitation Foundation (NSF) have approved the use in a variety of products, including washing machines, food packaging and toys. Proven to protect against E. coli and Staphylococcus, it's safe and will not irritate skin.
