

1

When we ship your phones we upload their MAC addresses to VTech's redirection server and email you the list of MAC addresses.

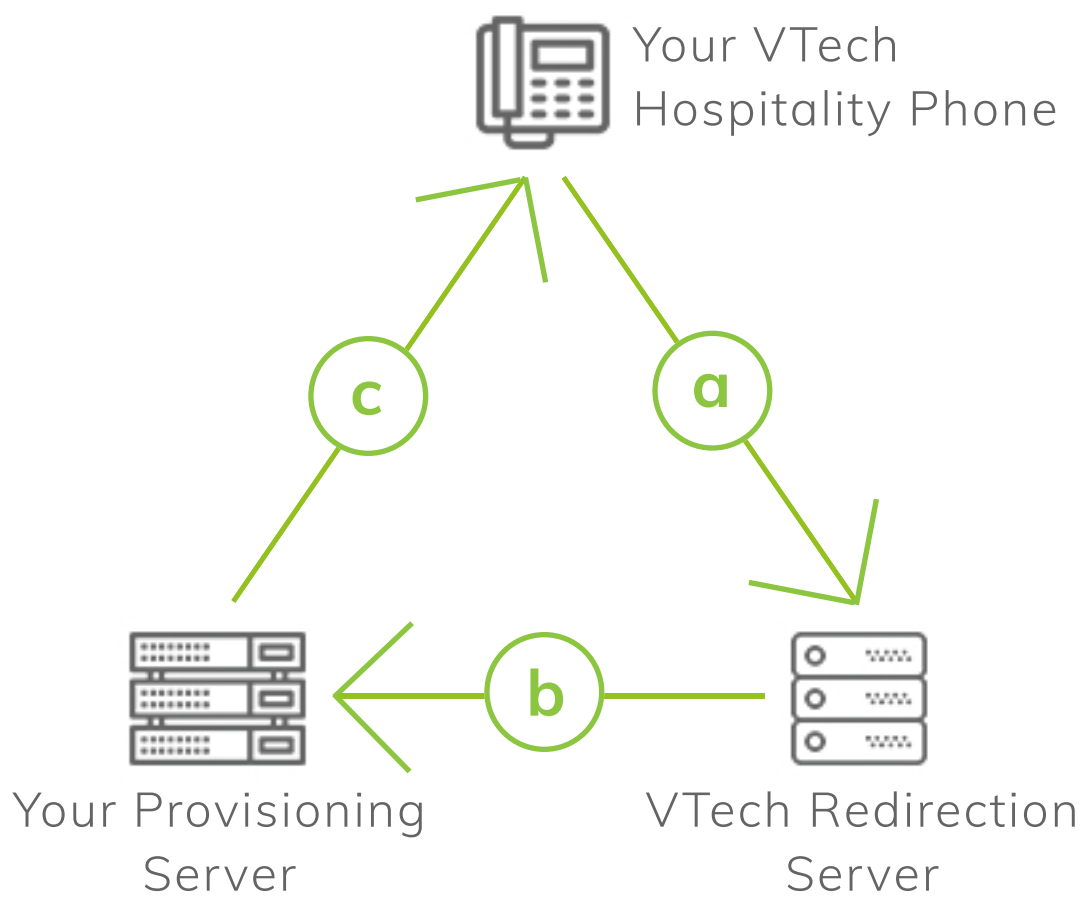

2

Using these MAC addresses, you create and upload your phone's configuration files to your provisioning server.

3

When the phones arrive and are connected, they visit the redirection server (a), then your provisioning server (b), from there they download their configuration (c).

## SUCCESS!

Your VTech Hospitality Phones are now configured.

## If you're having issues

Please don't hesitate to get in touch with us -
